

NEW OFFERING!

Integrate SAP PM and Microsoft Excel with Vesta PMX!

Realize New Efficiencies
by Fully Integrating
SAP PM and Excel!

Challenge

SAP Plant Maintenance users have a variety of tools to plan and schedule work. However, many users prefer the flexibility of Microsoft Excel to assign work to week days and individuals. Transferring data from SAP to Excel is already possible, but transferring assignments back from Excel to SAP is usually a manual task.

Solution

Vesta PMX is a packaged solution that allows customers to transfer work order information from SAP to Excel and back. Work order dates, work centers and employee assignments can be modified in Excel, detailed weekly plans can be built and the results can be written back to SAP without having to exit the Excel Application. Vesta PMX is built as a Microsoft Excel Add-In and works seamlessly with all SAP versions 4.6 and higher.

Benefits

- Modify work order information directly from Excel.
- Customizable to specific customers and site requirements.
- No development risk for customers.
- Support for future SAP and Excel releases.

Don't delay! Contact us to learn more about Vesta PMX and other helpful products and services!
